

ProofPC32™

The complete Proof-of-Deposit system for Image Capture, High Speed Capture and Balancing, Read-and-Key, On line Balance and Adjustment, and Report Preparation.

ProofPC32 takes advantage of the latest Microsoft™ technologies to provide a powerful, easy-to-use environment for performing complex transaction processing in financial institutions. Using a combination of database technologies and hardware capture speeds, ProofPC32 can be scaled to meet the needs of any financial institution.

ProofPC32 includes robust support for a variety of check image scanning devices. And support for all major desktop scanners make this the perfect solution for high or low volume proof-of-deposit operations, branch capture, customer capture, and microfilm replacement. Imaging support on all platforms includes display of images during capture at sample rates selected by the user for real-time viewing of image quality.

Combined with C21Express or ImageChex32, ProofPC32 handles the processing of transactions such as scanning at the branch, teller stations or at the central site.

Highlights:			
Check 21 Compliant	✓	Wide Range Scanner Support	✓
Image Cash Letters	✓	Data Mining	✓
Remote Branch and Customer Capture	✓	Standard Database (Microsoft Databases)	✓
On-line Balancing	✓	Image Capable	✓
CAR/LAR Amount Recognition	✓		

Implementation is accomplished with user-defined tables providing pocket selection, range checking, rule validation, MICR line parsing, and edit checking. As a result, installation can occur in the field with no programmer interaction required.

Also, check out the capabilities of remote capture with ProofPC32 Remote.
