

MANAGE YOUR ASSETS AND INVENTORY QUICKLY WITH PADtrax.

Whether you have expensive equipment, computers or important documents and files, chances are a lot of labor hours are being deployed to conduct manual or bar-coded audits. With PADtrax RFID, you can literally walk into a space, point, and have an instant inventory.

If you answer “no” to any of these questions, RFID may be for you:

- Are you able to quickly locate ALL of your assets?
- Can you take a full inventory in minutes?
- Can you track and locate assets from office to office?
- Is asset counting by hand good enough for your agency?

While some organizations have older bar code systems installed, RFID works better than barcodes. A significant advantage of RFID technology is an RFID tag does not need to be positioned precisely relative to the scanner. This eliminates the need for multiple “swipes,” or worse- manual entry when a swipe does not work. This is why RFID is superior to bar code technologies.

| Barcoding  | RFID  |
|---|--|
| Line of Sight | Read from a Distance |
| Read one-at-a-time | Read many-at-a-time |
| Manual (Human Performance) | Passive or Semi-Passive (No human effort required) |

When it comes to accounting for your items, you need PADtrax.

An asset management system for any size or type of organization.

- Easily deployed
- Browser-based
- Enhances asset management efficiencies
- Reduces operating costs
- Prevents and finds misplaced items
- Controls asset locations
- Automates archiving & retention/life cycle management of items
- Attach pictures, videos, documents

PADtrax optimizes the ability of staff to access the information needed– when they need it-enhancing productivity, customer service, and even safety.

AVOID RISK

Can you see assets moving from point-to-point in REAL TIME?

ACCURATE AND EFFICIENT

Institutions can shave hundreds of hours off their time spent tracking and accounting for asset status and location of items. Having up-to-date, accurate inventory data simplifies the process of reporting for both internal use and regulatory compliance:

- Asset depreciation tracking
- Warranty end dates
- Inventory and equipment physicals
- Rotational inventory (location)
- Changes to equipment status (out for service)
- Consumable inventories (medications, first aid items)

PADtrax Asset Management Solutions deliver greater than 99% discovery accuracy, and up to 95% reduction in labor costs. You can't afford to ignore it.

PADtrax: The world's first customer designed RFID Asset Management system.

RFID: WHO USES IT AND WHY?

LAW ENFORCEMENT:

Vests, uniforms, flashlights, radios, ammo and firearms—valuable assets law enforcement agencies need to track and account for, whether on a shelf or in the field.

MUNICIPALITIES:

This includes city/county offices, Clerk of Courts, Tax Assessors, Morgues and other municipal entities. Tracking computers, mobile devices and original signed documents such as case files and court documents are an urgent requirement.

SCHOOLS & LIBRARIES:

Computers, desks, chairs, books—schools and libraries need to keep track of assets which are temporarily “assigned” to individuals throughout the year, but must be inventoried at designated intervals.

CITY UTILITY SERVICES:

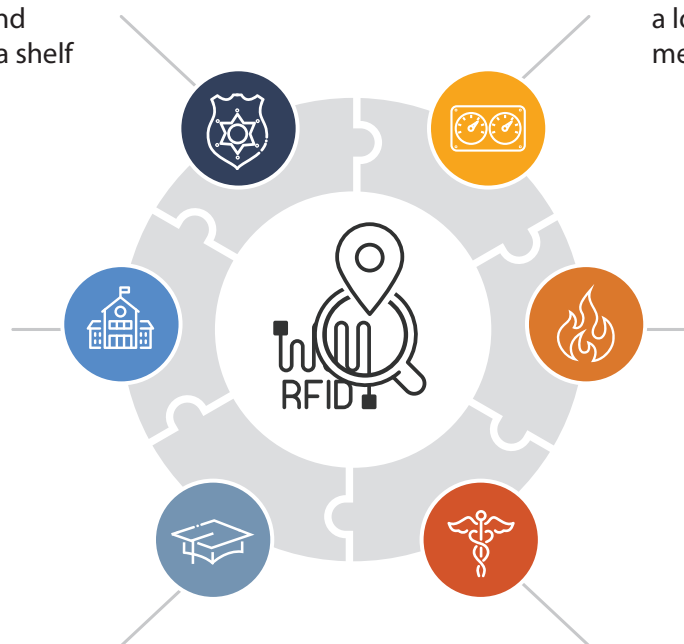

Fleet inventory, survey equipment, tools and field assets tend to move around a lot, and need a reliable method for tracking.

FIRE DEPARTMENTS:

Daily equipment checks and spot inventory locates rig equipment, medical supplies, and personal gear. Quickly establishes engine readiness. Maintains accurate audits of equipment and it's cycle-in date to support department's NFPA rating.

HEALTHCARE & PHARMACIES:

From medical equipment to scheduled drugs and controlled substances, pharmacies have an urgent need for accuracy of inventory and reporting.
